

GROWER'S FACTS

W.H.PERRON 

Pectinate spartina

Spartina pectinata

PLANTATION: Mix seeds with an equal amount of damp sand or vermiculite. Place the mixture in a sealed plastic bag. Store the bag in a refrigerator or cool storage room for 30 to 90 days. Sow seeds wherever desired as soon as the soil gets warm enough.

SOIL: cool or moist

CULTURALS PRACTICES: Sow seeds on the surface without covering after sowing. These seeds are very small and need light to germinate. Seeds can be mixed with fine sand or talcum for a uniform sowing.
