Gentian

Gentiana septemfida Lagodechiana Blue

PLANTATION: Indoor: It is suggested to sow 12 weeks before planting outside. Keep the temperature around 21 °C. Germination time is between 7-14 days.

Outdoor: Direct sowing in the spring.

SOIL: Indoor: Well-drained, porous seedling soil to prevent overwatering.

Outdoor: Well-drained, fresh soil.

CULTURALS PRACTICES: It requires full sun. Easily adapt to all regions except those with hot and very dry summers. Not difficult on the nature of the soil, it thrives in any properly drained soil, remaining fresh. It is useful to mix gravel, sand and peat with the original soil when the latter seems too compact.
