

GROWER'S FACTS

W.H.PERRON 

Oregano discs

69-6511-01N

PLANTATION: Inside: Choose a container larger than the disc, fill it with potting soil, line the surface to level it and place the seed disc there. Then cover with a thin layer of vermiculite or potting soil and water thoroughly. It is recommended to place the container under artificial light and to use a heating mat.

SOIL: A well-drained, porous seedling soil is ideal for preventing overwatering.

SPACING: A container more than 10 cm in diameter.

CULTURAL PRACTICES: Oregano is very hardy; it doesn't really experience any disease or pest attacks.

HARVEST: picking oregano leaves is done in the morning to preserve all of its aroma and freshness. Do it as and when you need it. You can also pluck the flowering stem entirely and dry it in a cool, airy room. Indeed, oregano can be used both fresh and dried.
