

GROWER'S FACTS

W.H.PERRON 

B ean - broad

CULTURAL PRACTICES: sow seeds 5 cm deep, in rows spaced 75 cm to 90 cm apart, leaving 20 cm to 30 cm between the plants.

SOIL: the soil should be moist and well drained.

SPACING: sow seeds 5 cm deep, in rows spaced 75 cm to 90 cm apart, leaving 20 cm to 30 cm between the plants.

GROWING TIPS: the broad bean prefers sunny places and cool, deep soils. Yields in loams are higher than those in light soils. Bean, however, requires good amounts of available potassium. Most phosphorus is absorbed between the third and ninth week.

HARVEST: harvest when the beans appear to be swollen. They are eaten in soups or various hot dishes.
