

# GROWER'S FACTS

W.H.PERRON 

## C hicory - Italian Raddichio

**CULTURAL PRACTICES:** resistant to cold, it can be sown as soon as the soil is worked. For an early harvest, sow in a hot or cold layer and transplant them directly in May. Germination will be faster and more uniform if the temperature is between 10 ° C and 15 ° C.

**SOIL:** rich, well-drained soil is ideal for its cultivation.

**SPACING:** for the main harvest, sow in the ground, in rows 40 cm to 45 cm apart. Depending on the variety, leave a distance of 20 to 25 cm between the plants.

**GROWING TIPS:** adding decomposed manure, compost, or fertilizer with a high level of nitrogen is beneficial. Needs full sun and constant humidity. Mulch them to reduce weeds and maintain soil moisture.

**HARVEST:** harvest it when firm and preferably early in the morning.
