

# GROWER'S FACTS

W.H.PERRON 

## LEEK

---

**CULTURAL PRACTICES:** the leek has a slow vegetative development. Sow it indoors in early March, thinning out too dense seedlings. When the foliage of the leek seedlings reaches 6 to 8 cm in length, cut off the ends so that the plants grow larger.

**SOIL:** very rich, very deep, well exposed to the sun.

**SPACING:** Transplant them into the garden as soon as the soil allows (12 ° C), spacing them 10-15 cm and 25 cm between the rows.

**GROWING TIPS:** Transplant them into the garden as soon as the soil allows (12 ° C), spacing them 10-15 cm and 25 cm between the rows.

**HARVEST:** pluck the leeks, shake the earth, cut the roots to 1 cm and shorten the leaves.
