

# GROWER'S FACTS

W.H.PERRON 

## P ARSNIP

---

**CULTURAL PRACTICES:** sow parsnip very early, as soon as the soil temperature is 16 ° C.

**SOIL:** a sandy and poor soil, in which there is not too much fertilizer, is ideal.

**SPACING:** the seeds should be sown fairly close to each other, as germination is difficult.

**GROWING TIPS:** Weed and hoe the soil regularly and water in case of hot weather or prolonged summer drought.

**HARVEST:** remove the roots at the end of October or cover them with mulch and harvest them only the following spring.
