CERTIFICATE OF NON-TRANSGENIC SEEDS (GMO)

To the best of our knowledge

- We declare that all our commercialized varieties of vegetables, fine herbs, sprouts or others announced in our catalogues or price lists have been developed by traditional methods of crossing and that none have been developed through Genetically Modified Organism (GMO) technology.
- In order to achieve high purity standards and to avoid the presence of off-types, including GMOs, our seed production are being carried out under the greatest possible care based on the legal rules, including stipulated isolation distances in fields.
- Certain products developed by means of biotechnologies are available on special orders only. Those products are shipped in the original sealed containers (no bagging or other manipulation) to eliminate any possible contamination with conventional and organic seeds.
- Rest assured that in the event of the development of a new variety created through biotechnologies, this variety will be clearly identified in our advertisements and any relevant documentation (order form, invoice, catalogue, price list and packaging).
